RULES FOR PROPER INSTALLATION

- The green line that identifies ATP drip lines and hoses indicates the correct installation position of the product, which must always be installed with the dripper facing upward;
- Avoid impacts during installation that may damage the product through cuts, punctures, abrasion, tension, or similar causes;
- To avoid burns caused by the lens effect, do not install the product under a transparent plastic film;
- It is recommended to disinfect the soil before installation when insects with chewing mouthparts are present;
- Before connecting the product, ensure that the main and secondary lines are clean;
- For fertirrigation, it is recommended to use fully water- soluble fertilizers to prevent sediment buildup that could clog the dripper.

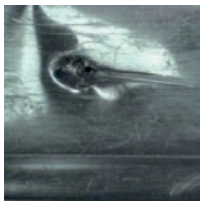

POSSIBLE DAMAGES CAUSED BY EXTERNAL FACTORS

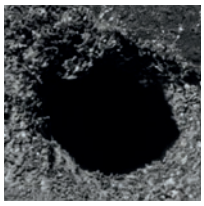

Insects

Lens effect

Pressure

Rodents

Mechanical shock

Birds
